

SUSTAINABLE DEVELOPMENT GOALS

LEVEL	3
LEARNING OUTCOME	LO1: Students can analyse their strengths, competences and moral compass in their own environment
SPECIFIC LEARNING OUTCOME	Students can analyse the impacts of decisions made by them and by others from different ethical points of view
KEYWORDS	Ecological footprint, ethical point of view
INTRODUCTION	This exercise gives insight in how human activities have an impact on the planet. Thanks to looking up the ecological footprints of countries and biocapacity, students gain an understanding of this. By also calculating their own footprint, they can think about what needs to be done to move toward a sustainable society.
HOW TO WORK WITH THIS MATERIAL	Use a PowerPoint to instruct the students about the basics of the ecological footprint and biocapacity. Give the students some time to make the tasks and make sure you have a moment of reflection to discuss their findings.
TIMING	1,5h

3.1.2 SPECIFIC LEARNING OUTPUT:

Students can analyse the impacts of decisions made by them and by others from different ethical points of view

Introduction and theory:

- This exercise gives insight in how human activities have an impact on the planet. Thanks to looking up the ecological footprints of countries and biocapacity, students gain an understanding of this. By also calculating their own footprint, they can think about what needs to be done to move toward a sustainable society.

Exercises:

Use a PowerPoint to instruct the students about the basics of the ecological footprint and biocapacity. Give the students some time to make the tasks and make sure you have a moment of reflection to discuss their findings.
